

Keeley Electronics has updated the ECCOS Delay/Looper effect pedal with a few new features! These updates are in response to the great feedback from players that took a deep-dive into the features of the ECCOS and wanted even more!

We have added a 'Sound on Sound' recording mode that allows you to record very long (tape style) loops that now fade over time. There is now 'Silent Delete' in the Looper mode, simply double-tap and hold Bypass, just like many other loopers. With the updates, there is now complete independence between Looper and Delay modes; you can loop with or without delay effects. Presets are increased from 3 to 4, and the Infinite Feedback Mode now has a Level control. The new updates have been shipping for quite a while now, but if yours has serial number 1800 or lower, you are qualified to get yours updated at no charge.

Get your ECCOS updated with new features for free! Simply send your ECCOS back to us! Go online to <https://robertkeeley.com/product/eccos-delay-looper/> for more details.
